

Remediation Guide

Tool Source: Qualys | Report Month: July 2026

Total Findings	125
Critical	31
High	31
Immediate Patch Needed	72
Exploit Available	51

Contents

1	Report Summary
2	Remediation Actions
3	Validation Expectations

1. Report Summary

This guide prioritizes remediation work using the approved MVA severity and exploit availability matrix. P1 and P2 items should be handled first because they represent the highest remediation priority.

Priority Distribution

Priority	Count
P1	41
P2	31
P3	26
P4	27

Severity Distribution

Severity	Count
Critical	31
High	31
Medium	31
Low	32

Remediation Execution Notes

Validate a maintenance window for service-impacting changes, keep rollback evidence, apply fixes by priority, and confirm closure with a follow-up scan after the change window.

2. Remediation Actions

1. Apache Tomcat AJP Request Injection

Affected Assets: 12 findings across 4 assets
Asset Examples: asset-001.corp.local, asset-011.corp.local, asset-021.corp.local, asset-031.corp.local
Severity / Priority: Critical / P1
CVE: CVE-2020-1938

Advisory links

<https://tomcat.apache.org/security-9.html>

Recommended remediation

Apply the vendor security update, restart the affected service if required, and validate with a follow-up scan.

Implementation and validation commands

```
/opt/tomcat/bin/version.sh
grep -n 'Connector.*AJP' /opt/tomcat/conf/server.xml
# upgrade Tomcat and disable unused AJP or require a secret
sudo systemctl restart tomcat
/opt/tomcat/bin/version.sh
```

2. Remote Desktop Weak Encryption Enabled

Affected Assets: 12 findings across 4 assets

Asset Examples: asset-005.corp.local, asset-015.corp.local, asset-025.corp.local, asset-035.corp.local

Severity / Priority: Critical / P1

CVE: N/A

Advisory links

<https://www.qualys.com/research/security-alerts/>

Recommended remediation

Apply the vendor security update, restart the affected service if required, and validate with a follow-up scan.

Implementation and validation commands

```
Get-HotFix | Sort-Object InstalledOn -Descending | Select-Object -First 10
# install the approved Microsoft security update and reboot if required
Get-Service TermServLicensing
Get-HotFix | Sort-Object InstalledOn -Descending | Select-Object -First 10
```

3. Linux Kernel Security Update Available

Affected Assets: 13 findings across 4 assets

Asset Examples: asset-009.corp.local, asset-019.corp.local, asset-029.corp.local, asset-039.corp.local

Severity / Priority: Critical / P1

CVE: CVE-2024-1086

Advisory links

<https://www.qualys.com/research/security-alerts/>

Recommended remediation

Apply the vendor security update, restart the affected service if required, and validate with a follow-up scan.

Implementation and validation commands

```
uname -r
sudo apt-get update
sudo apt-get install --only-upgrade linux-image-generic
sudo reboot
# after reboot
uname -r
```

4. Microsoft SQL Server Unsupported Version

Affected Assets: 12 findings across 4 assets

Asset Examples: asset-003.corp.local, asset-013.corp.local, asset-023.corp.local, asset-033.corp.local

Severity / Priority: Critical / P1

CVE: N/A

Advisory links

<https://learn.microsoft.com/sql/sql-server/end-of-support>

Recommended remediation

Upgrade the affected software to a vendor-supported release and validate with a follow-up scan.

Implementation and validation commands

```
SELECT @@VERSION;  
# upgrade to a supported SQL Server release or migrate workload  
# run validation scan after maintenance window
```

5. SMB Signing Not Required

Affected Assets: 13 findings across 4 assets

Asset Examples: asset-007.corp.local, asset-017.corp.local, asset-027.corp.local, asset-037.corp.local

Severity / Priority: Critical / P1

CVE: N/A

Advisory links

<https://learn.microsoft.com/windows/security/threat-protection/security-policy-settings/microsoft-network-server-digital-sign-communications-always>

Recommended remediation

Require SMB signing through Group Policy and validate domain controller and member server policy refresh.

Implementation and validation commands

```
# apply vendor security update
# restart affected service if required
# rerun vulnerability scan and confirm closure
```

6. Apache Log4j Remote Code Execution

Affected Assets: 12 findings across 4 assets

Asset Examples: asset-002.corp.local, asset-012.corp.local, asset-022.corp.local, asset-032.corp.local

Severity / Priority: High / P1

CVE: CVE-2021-44228

Advisory links

<https://logging.apache.org/log4j/2.x/security.html>

Recommended remediation

Apply the vendor security update, restart the affected service if required, and validate with a follow-up scan.

Implementation and validation commands

```
find /opt -name 'log4j-core-*.jar' -print
# replace the vulnerable JAR through the approved application release
sudo systemctl restart <affected-service>
find /opt -name 'log4j-core-*.jar' -print
```

7. Nginx Security Update Available

Affected Assets: 13 findings across 4 assets

Asset Examples: asset-006.corp.local, asset-016.corp.local, asset-026.corp.local, asset-036.corp.local

Severity / Priority: High / P1

CVE: CVE-2025-2345

Advisory links

https://nginx.org/en/security_advisories.html

Recommended remediation

Apply the vendor security update, restart the affected service if required, and validate with a follow-up scan.

Implementation and validation commands

```
# apply vendor security update
# restart affected service if required
# rerun vulnerability scan and confirm closure
```

8. TLS 1.0 Protocol Detection

Affected Assets: 13 findings across 4 assets

Asset Examples: asset-010.corp.local, asset-020.corp.local, asset-030.corp.local, asset-040.corp.local

Severity / Priority: High / P1

CVE: N/A

Advisory links

<https://www.qualys.com/research/security-alerts/>

Recommended remediation

Disable TLS 1.0 and TLS 1.1, enable TLS 1.2 or later, then restart the affected service.

Implementation and validation commands

```
# apply vendor security update
# restart affected service if required
# rerun vulnerability scan and confirm closure
```

9. OpenSSL Security Update Available

Affected Assets: 12 findings across 4 assets

Asset Examples: asset-004.corp.local, asset-014.corp.local, asset-024.corp.local, asset-034.corp.local

Severity / Priority: High / P1

CVE: CVE-2023-0286

Advisory links

<https://www.openssl.org/news/vulnerabilities.html>

Recommended remediation

Apply the vendor security update, restart the affected service if required, and validate with a follow-up scan.

Implementation and validation commands

```
openssl version -a
sudo apt-get update
sudo apt-get install --only-upgrade openssl
sudo systemctl restart <affected-service>
openssl version -a
```

10. Oracle Java Unsupported Version

Affected Assets: 13 findings across 4 assets
Asset Examples: asset-008.corp.local, asset-018.corp.local, asset-028.corp.local, asset-038.corp.local
Severity / Priority: High / P1
CVE: CVE-2024-20919

Advisory links

<https://www.qualys.com/research/security-alerts/>

Recommended remediation

Upgrade the affected software to a vendor-supported release and validate with a follow-up scan.

Implementation and validation commands

```
# apply vendor security update
# restart affected service if required
# rerun vulnerability scan and confirm closure
```

3. Validation Expectations

Use these controls for every remediation action. Product-specific vendor instructions and approved change procedures take precedence over example commands in this guide.

Before change	Record the installed version, affected service state, maintenance window, backup or rollback method, and approved change reference.
After change	Confirm the fixed version, required service restart or host reboot, application health, and business-owner acceptance.
Security validation	Run a fresh authenticated scan, verify the finding is absent, retain scanner evidence, and investigate any recurrence.
Exception handling	Document owner, compensating controls, target date, and formal risk acceptance when remediation cannot be completed.

Required Evidence

Attach pre-change and post-change version output, implementation logs, restart or reboot confirmation, application validation, and the follow-up scan result to the change record.
