

Remediation Guide

Tool Source: CrowdStrike | Report Month: July 2026

Total Findings	120
Critical	30
High	30
Immediate Patch Needed	83
Exploit Available	47

Contents

1	Report Summary
2	Remediation Actions
3	Validation Expectations

1. Report Summary

This guide prioritizes remediation work using the approved MVA severity and exploit availability matrix. P1 and P2 items should be handled first because they represent the highest remediation priority.

Priority Distribution

Priority	Count
P1	24
P2	59
P3	18
P4	19

Severity Distribution

Severity	Count
Critical	30
High	30
Medium	30
Low	30

Remediation Execution Notes

Validate a maintenance window for service-impacting changes, keep rollback evidence, apply fixes by priority, and confirm closure with a follow-up scan after the change window.

2. Remediation Actions

1. Google Chrome use-after-free vulnerability

Affected Assets: 15 findings across 15 assets

Asset Examples: cs-asset-001.corp.example, cs-asset-003.corp.example, cs-asset-006.corp.example, cs-asset-011.corp.example, cs-asset-014.corp.example

Severity / Priority: Critical / P1

CVE: CVE-2024-4671

Advisory links

<https://chromereleases.googleblog.com/>

<https://nvd.nist.gov/vuln/detail/CVE-2024-4671>

Recommended remediation

Update Google Chrome to the latest enterprise stable release and relaunch the browser. Patch Google Chrome during the approved change window and capture validation evidence. Apply the minimum vendor-supported fixed release. Test in pre-production, deploy, restart if required, and run a verification scan.

Implementation and validation commands

```
winget upgrade --id Google.Chrome --exact --silent --accept-source-agreements
--accept-package-agreements
(Get-Item 'C:\Program Files\Google\Chrome\Application\chrome.exe').VersionInfo.FileVersion
```

2. Windows Remote Desktop Licensing Service remote code execution

Affected Assets: 15 findings across 15 assets

Asset Examples: cs-asset-002.corp.example, cs-asset-005.corp.example, cs-asset-007.corp.example, cs-asset-010.corp.example, cs-asset-015.corp.example

Severity / Priority: Critical / P1

CVE: CVE-2024-38077

Advisory links

<https://msrc.microsoft.com/update-guide/vulnerability/CVE-2024-38077>

<https://nvd.nist.gov/vuln/detail/CVE-2024-38077>

Recommended remediation

Install the current Microsoft cumulative security update and restart the affected host. Patch Microsoft Windows Server during the approved change window and capture validation evidence. Apply the minimum vendor-supported fixed release. Test in pre-production, deploy, restart if required, and run a verification scan.

Implementation and validation commands

```
Get-HotFix | Sort-Object InstalledOn -Descending | Select-Object -First 10
# install the approved Microsoft security update and reboot if required
Get-Service TermServLicensing
Get-HotFix | Sort-Object InstalledOn -Descending | Select-Object -First 10
```

3. Cisco IOS XE web UI privilege escalation

Affected Assets: 15 findings across 15 assets

Asset Examples: cs-asset-002.corp.example, cs-asset-004.corp.example, cs-asset-007.corp.example, cs-asset-012.corp.example, cs-asset-015.corp.example

Severity / Priority: High / P1

CVE: CVE-2023-20198

Advisory links

<https://sec.cloudapps.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-iosxe-webui-privesc-j22SaA4z>
<https://nvd.nist.gov/vuln/detail/CVE-2023-20198>

Recommended remediation

Install the fixed Cisco IOS XE release and disable the HTTP server when it is not required. Patch Cisco IOS XE during the approved change window and capture validation evidence. Apply the minimum vendor-supported fixed release. Test in pre-production, deploy, restart if required, and run a verification scan.

Implementation and validation commands

```
show version
show running-config | include ^ip http
# stage and activate the vendor-fixed IOS XE image under the approved network change
show version
```

4. Apache Log4j remote code execution

Affected Assets: 15 findings across 15 assets

Asset Examples: cs-asset-003.corp.example, cs-asset-008.corp.example, cs-asset-011.corp.example, cs-asset-016.corp.example, cs-asset-019.corp.example

Severity / Priority: High / P1

CVE: CVE-2021-44228

Advisory links

<https://logging.apache.org/log4j/2.x/security.html>

<https://nvd.nist.gov/vuln/detail/CVE-2021-44228>

Recommended remediation

Upgrade Log4j to a vendor-supported fixed release and restart the application service. Patch Apache Log4j during the approved change window and capture validation evidence. Apply the minimum vendor-supported fixed release. Test in pre-production, deploy, restart if required, and run a verification scan.

Implementation and validation commands

```
find /opt -name 'log4j-core-*.jar' -print
# replace the vulnerable JAR through the approved application release
sudo systemctl restart <affected-service>
find /opt -name 'log4j-core-*.jar' -print
```

5. Linux kernel netfilter use-after-free

Affected Assets: 15 findings across 15 assets

Asset Examples: cs-asset-003.corp.example, cs-asset-005.corp.example, cs-asset-008.corp.example, cs-asset-013.corp.example, cs-asset-016.corp.example

Severity / Priority: Medium / P2

CVE: CVE-2024-1086

Advisory links

<https://nvd.nist.gov/vuln/detail/CVE-2024-1086>

Recommended remediation

Install the distribution kernel security update and reboot into the fixed kernel. Patch Linux Kernel during the approved change window and capture validation evidence. Apply the minimum vendor-supported fixed release. Test in pre-production, deploy, restart if required, and run a verification scan.

Implementation and validation commands

```
uname -r
sudo apt-get update
sudo apt-get install --only-upgrade linux-image-generic
sudo reboot
# after reboot
uname -r
```

6. OpenSSL X.400 address type confusion

Affected Assets: 15 findings across 15 assets

Asset Examples: cs-asset-001.corp.example, cs-asset-004.corp.example, cs-asset-009.corp.example, cs-asset-012.corp.example, cs-asset-017.corp.example

Severity / Priority: Medium / P2

CVE: CVE-2023-0286

Advisory links

<https://www.openssl.org/news/secadv/20230207.txt>

<https://nvd.nist.gov/vuln/detail/CVE-2023-0286>

Recommended remediation

Apply the operating-system vendor OpenSSL package update and restart dependent services. Patch OpenSSL during the approved change window and capture validation evidence. Apply the minimum vendor-supported fixed release. Test in pre-production, deploy, restart if required, and run a verification scan.

Implementation and validation commands

```
openssl version -a
sudo apt-get update
sudo apt-get install --only-upgrade openssl
sudo systemctl restart <affected-service>
openssl version -a
```

7. Microsoft Exchange privilege escalation

Affected Assets: 15 findings across 15 assets

Asset Examples: cs-asset-001.corp.example, cs-asset-004.corp.example, cs-asset-006.corp.example, cs-asset-009.corp.example, cs-asset-014.corp.example

Severity / Priority: Low / P2

CVE: CVE-2024-21410

Advisory links

<https://msrc.microsoft.com/update-guide/vulnerability/CVE-2024-21410>

<https://nvd.nist.gov/vuln/detail/CVE-2024-21410>

Recommended remediation

Install the supported Exchange Server security update and verify Extended Protection configuration. Patch Microsoft Exchange Server during the approved change window and capture validation evidence. Apply the minimum vendor-supported fixed release. Test in pre-production, deploy, restart if required, and run a verification scan.

Implementation and validation commands

```
Get-ExchangeServer | Format-List Name, Edition, AdminDisplayVersion
# install the approved Exchange Security Update and reboot if required
Get-ExchangeServer | Format-List Name, Edition, AdminDisplayVersion
```

8. Apache Tomcat AJP file read and inclusion

Affected Assets: 15 findings across 15 assets

Asset Examples: cs-asset-002.corp.example, cs-asset-005.corp.example, cs-asset-010.corp.example, cs-asset-013.corp.example, cs-asset-018.corp.example

Severity / Priority: Low / P2

CVE: CVE-2020-1938

Advisory links

<https://tomcat.apache.org/security-9.html>

<https://nvd.nist.gov/vuln/detail/CVE-2020-1938>

Recommended remediation

Upgrade Apache Tomcat, disable unused AJP connectors, and require a connector secret. Patch Apache Tomcat during the approved change window and capture validation evidence. Apply the minimum vendor-supported fixed release. Test in pre-production, deploy, restart if required, and run a verification scan.

Implementation and validation commands

```
/opt/tomcat/bin/version.sh
grep -n 'Connector.*AJP' /opt/tomcat/conf/server.xml
# upgrade Tomcat and disable unused AJP or require a secret
sudo systemctl restart tomcat
/opt/tomcat/bin/version.sh
```

3. Validation Expectations

Use these controls for every remediation action. Product-specific vendor instructions and approved change procedures take precedence over example commands in this guide.

Before change	Record the installed version, affected service state, maintenance window, backup or rollback method, and approved change reference.
After change	Confirm the fixed version, required service restart or host reboot, application health, and business-owner acceptance.
Security validation	Run a fresh authenticated scan, verify the finding is absent, retain scanner evidence, and investigate any recurrence.
Exception handling	Document owner, compensating controls, target date, and formal risk acceptance when remediation cannot be completed.

Required Evidence

Attach pre-change and post-change version output, implementation logs, restart or reboot confirmation, application validation, and the follow-up scan result to the change record.
